

IDENTIFYING DATA

Satellite Navigation and Communication Systems

Subject	Satellite Navigation and Communication Systems			
Code	V05G300V01912			
Study programme	(*)Grao en Enxeñaría de Tecnoloxías de Telecomunicación			
Descriptors	ECTS Credits 6	Choose Optional	Year 4th	Quadmester 1st
Teaching language	English			
Department				
Coordinator	Mosquera Nartallo, Carlos			
Lecturers	Aguado Agelet, Fernando Antonio García Sánchez, Manuel Mosquera Nartallo, Carlos			
E-mail	mosquera@gts.uvigo.es			
Web	http://fatic.uvigo.es			
General description	The contents of this course cover the basics of satellite navigation and satellite communication systems: GPS and Galileo, the different segments of satellite communication systems, and an introduction to the planning and development standards. The course will be entirely conducted in English; the use of Spanish or Galego will be optionally allowed in the last exam.			

Competencies

Code	
A2	CG2: The knowledge, comprehension and ability to apply the needed legislation during the development of the Technical Telecommunication Engineer profession and aptitude to manage compulsory specifications, procedures and laws.
A3	CG3: The knowledge of basic subjects and technologies that capacitates the student to learn new methods and technologies, as well as to give him great versatility to confront and update to new situations
A4	CG4: The ability to solve problems with initiative, to make creative decisions and to communicate and transmit knowledge and skills, understanding the ethical and professional responsibility of the Technical Telecommunication Engineer activity.
A76	(CE67/OP10) Applying conceptual, theoretical and practical tools of telecommunications in the development and applications of navigation and satellite communications systems.
A77	(CE68/OP11) The ability for selection of navigation and satellite communications systems and subsystems.

Learning aims

Expected results from this subject	Training and Learning Results
To know the planning and development standards of satellite systems.	A2 A3 A76 A77
To know the different alternatives of communication and navigation satellite systems, their different segments (space, ground and user) and the type of orbits.	A3 A4 A76 A77
To know the more usual systems and services for satellite communications, including their technological capabilities and limitations.	A3 A76 A77

To know and apply satellite navigation systems: GPS, Galileo, and other systems.

A2
A3
A4
A76
A77

Contents

Topic	
Introduction	<ul style="list-style-type: none"> - System definition - Standards - Regulations - Allocated frequency bands
Elements of a System	<ul style="list-style-type: none"> - Ground Segment - Space Segment - Launch Segment - User Segment
Architecture of the Communication Subsystems	Subsystems: <ul style="list-style-type: none"> - Antennas - Payload: transponders
Introduction to Satellite Communications	<ul style="list-style-type: none"> - Main elements in a communications payload - Signal propagation impairments - Link budget - Multibeam satellites
Satellite Communication Services	<ul style="list-style-type: none"> - Fixed Satellite Services (FSS) - Broadcast Satellite Services (BSS) - Mobile Satellite Services (MSS)
Introduction to Navigation Systems (GNSS)	<ul style="list-style-type: none"> - GPS, Galileo, Glonass, and other systems.

Planning

	Class hours	Hours outside the classroom	Total hours
Master Session	21	42	63
Practice in computer rooms	13	39	52
Laboratory practises	4	8	12
Tutored works	3	9	12
Short answer tests	1	10	11

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Master Session	We describe the different aspects of the subject providing all the necessary educational material.
Practice in computer rooms	Every student will apply the theoretical knowledge to different practical tasks covering the main part of the contents of the subject with the help of the software suites.
Laboratory practises	Every student will apply in a practical way the different theoretical knowledge in a specific context.
Tutored works	The student will work in groups, with the support of the university lecturers, to apply, extend and personalize the contents covered in the theoretical and laboratory hours.

Personalized attention

Assessment

	Description	Qualification
Practice in computer rooms	The students will perform laboratory practice where they will work with concepts studied in the theoretical classes.	40
Laboratory practises	In these laboratory practices the capabilities A76, A77, A3 and A4 will be evaluated. Each student will perform field practices. The evaluation will be performed by means of a report for a total weight of 10% of the final mark.	10
Tutored works	In these field practices, the capabilities A76, A77, A3 and A4 will be evaluated. The evaluation of the group work will be taken into account as well as the understanding, maturity, importance and originality of the work and interaction between the group.	5
	In these tutored works the capabilities A76, A77, A3 and A4 will be evaluated.	

Short answer tests A final test to evaluate the contents presented in the master sessions. The test will be individual with time limit.

45

In this short answers test, the capabilities A76, A77, A2, A3 and A4 will be evaluated.

Other comments on the Evaluation

At the beginning of the term, the student will choose the assessment methodology: final exam or continuous evaluation.

Both, documentation and presentations of this subject will be exclusively in English.

English shall be used for writing the reports to evaluate the laboratory practices and the tutored works.

The students may use either English, Spanish or Galego to respond the short answer test.

The subject will be evaluated through one of the following mechanisms:

Final exam:

- The exam will include questions and/or numerical problems related with the contents presented in master sessions, laboratory practices and tutored works. It will be necessary to obtain 5 points over 10 to pass the exam.

Continuous evaluation (the students who choose the continuous evaluation method will not be allowed to attend the final exam in the first call). The subject will be assessed throughout the entire term:

- **Laboratory practices:** each student will have to perform different tasks with a total weight of 40% of the final mark.
- **Tutored works:** each student will participate in different tutored works proposed during the lecture period. This part will be evaluated by written reports. These reports will have a total weight of 5% of the final mark.
- **Outdoor study/field practices:** each student will perform field practices. A report must be turned in to get a maximum score of 10% of the final grade.
- **Short answer test:** This exam will be the final assessment of the continuous evaluation, and it will have a total weight of 45% of the final mark.

Make-up exam (second exam): the student will have to take an exam which will include questions and/or numerical problems related with the contents presented in the master sessions, the laboratory practices and the tutored works (100% of the final mark). Optionally, they could take a partial exam on the contents of the master session (45% of the final mark).

All the different grades are only valid for the current course, and will expire after the second call in case someone needs to take the course again.
