
IDENTIFYING DATA				
Systems engineering and aerospace communications				
Subject	Systems engineering and aerospace communications			
Code	O07G410V01925			
Study programme	Grado en Ingeniería Aeroespacial			
Descriptors	ECTS Credits	Choose	Year	Quadmester
	6	Optional	3rd	2nd
Teaching language	#EnglishFriendly Spanish			
Department				
Coordinator	Rodicio Masid, Antonio			
Lecturers	Isasi de Vicente, Fernando Guillermo			
E-mail	antonio.rodicio@uvigo.gal			
Web	http:// aero.uvigo.es			
General description	Introduction to the engineering of systems and to the systems of communications with aerospace vehicles. International students may request from the teachers: a) materials and bibliographic references in English, b) tutoring sessions in English, c) exams and assessments in English.			

Training and Learning Results	
Code	
A3	That the students have the capability to gather and interpret relevant data (usually within their area of study) to issue judgments that include a reflection on relevant social, scientific or ethical issues
A5	That the students develop those learning capabilities necessary to undertake further studies with a high degree of autonomy.
B1	Capabiliity for design, development and management in the field of aeronautical engineering (in according with what is established in section 5 of order CIN / 308/2009), aerospace vehicles, aerospace propulsion systems, aerospace materials , airport infrastructures, air navigation infrastructures and space management, air traffic and transport management systems.
B4	Verification and certification in the field of aeronautical engineering that aim, in accordance with the knowledge acquired (in accordance with what is established in section 5 of order CIN / 308/2009), aerospace vehicles, aerospace propulsion systems, aerospace materials, airport infrastructures, air navigation infrastructures and space management, air traffic and transport management systems.
C19	Applied knowledge of: science and technology of materials; mechanics and thermodynamics; fluid mechanics; aerodynamics and flight mechanics; navigation and air traffic systems; aerospace technology; theory of structures; airborne transportation; economy and production; projects; environmental impact.
D2	Leadership, initiative and entrepreneurship
D3	Capability of oral and written communication in native lenguage
D4	Capability of autonomous learning and information management
D5	Capability to solve problems and draw decisions
D6	Capabiliity for interpersonal communication
D8	Capabiliity for critical and self-critical reasoning
D11	Show motivation for quality with sensitivity towards subjects within the scope of the studies
D13	Sustainability and environmental commitment. Equitable, responsible and efficient use of resources

Expected results from this subject	
Expected results from this subject	Training and Learning Results

Understanding, knowledge and application of the national and international standards applied to the aerospace engineering. Understanding of the concept of System Engineering.	A3 A5	B1 B4		D2 D3 D4 D5 D6 D8 D11
Compression, knowledge of the systems of communications in aerospace vehicles		B4	C19	D5 D6 D8 D13

Contents	
Topic	
Concept of Engineering of Systems	Need of an engineering of systems. Simple examples
Standard nations and Internaciones of Engineering of Systems in Aerospace projects	Study of the most used standards in: aerial Systems spatial Systems common Points
Application to national and international projects of Engineering of Systems.	Examples: aerial System: commercial aerial navigation spatial System: nano-hammer satellites
Introduction	Basic concepts of aerial navigation and communications
Direction finding	Principles Applications
VOR	Principle of operation Description Use
DME/TACAN	Principle of operation Description Use
ILS	Principle of operation Description Use
Primary radar	Principle of operation Description Use
Secondary radar	Principle of operation Description Use
GPS	Principle of operation Description Use
Augmented reality systems	Principle of operation Description Use

Planning			
	Class hours	Hours outside the classroom	Total hours
Lecturing	30	75.5	105.5
Laboratory practical	20	22	42
Problem and/or exercise solving	2.5	0	2.5
*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.			

Methodologies	
	Description
Lecturing	Lecture with help of blackboard and computer. These lectures treat about the theory of the subject. With this methodology work the competitions CG1, CG4, CB3, CB5, CE19, CT8 and CT5. This is a grupal activity.

Laboratory practical	Use of simulators of systems of communications and/or navigation. Use of basic tools in the engineering of systems. With this methodology work the competitions CG1, CG4, CB3, CE19, CT2, CT4, CT5, CT6, CT11 and CT13. It is a grupal.activity.

Personalized assistance

Methodologies	Description
Lecturing	Tutor sessions will be scheduled by the professor when a student sends an email asking for it. They will be at the professor's virtual office.
Laboratory practical	In the practices of laboratory the student can ask professor to resolve doubts. Tutor sessions will be scheduled by the professor when a student sends an email asking for it. They will be at the professor's virtual office.

Assessment

	Description	Qualification	Training and Learning Results
Laboratory practical	Evaluation of group work and individual questions during the practical sessions. Cross asessment surveys can vary final marks as well. Also, cross assesment surveys may affect the marks. The continuous assessment tests will be carried out during the lectures' schedule.	20	A5 B1 C19 D4 B4 D5 D6 D8 D13
Problem and/or exercise solving	Tests will have short practical questions and theoretical questions about the contents of magistral lectures. There are two tests during the course: one about the middle of course about the first half of subject and other at the end of lectures. These tests worth 40% of final mark. The second test will cover the second half of the subject for students who have got a mark better than 3/10 in the middle course test. If a student didn't got a mark over 3/10 in a test or wants to improve mark, will make the test about all subject. In this case, the test will cover all subject. If the mark got in the first half part of test is not better than the one got in the continuous assesment tests, the mark will be the latter. The continuous assessment tests will be carried out during the lectrues' schedule.	80	A5 B4 C19 D4 D5 D8

Other comments on the Evaluation

In the case that a student failed more than 20% of practice sessions, he / she will not be able to pass the subject by continuous assesment. The first and second calls will evaluate the whole subject. In the case that he / she prefers and has done laboratory practices and obtained more than a 3/10 in them, the student can do only the theoretical part. This theoretical part weighs 80% of the mark, the other 20% will be the mark obtained during the course. If the student has not practiced, they may be asked in a written exam or in the laboratory, weighing the mark of practices by 20% and the theory of 80%. Students who officially resign to the continuous assessment, the mark obtained in a corresponding exam will represent 100% of the qualification. The evaluation test calendar officially approved by the EEAE Center Board is published on the website http://aero.uvigo.es/gl/docencia/exames

Plagiarism is regarded as serious dishonest behavior. If any form of plagiarism is detected in any of the tests or exams, the final grade will be FAIL (0), and the incident will be reported to the corresponding academic authorities for prosecution.

The student has the right to opt for the global assessment according to the procedure and the deadline established by the centre for each call.

In the end-of-program call assessment, the criteria shall be the same as in the second-call examination.
