Elasticity and additional topics in resistance of materials

Subject	Elasticity and additional topics in resistance of materials			
Code	V12G380V01502			
Study programme	Grado en Ingeniería Mecánica			
Descriptors	ECTS Credits	Choose	Year	Quadmester
	9	Mandatory	3rd	1st
Teaching language	Spanish			
Department				
Coordinator	Badaoui Fernández, Aida			
Lecturers	Badaoui Fernández, Aida Caride Tesouro, Luís Miguel Comesaña Piñeiro, Rafael García González, Marcos Lorenzo Mateo, Jaime Alberto Riveiro Rodríguez, Antonio			
E-mail	aida@uvigo.es			
Web				
General description	<p>This course will study the fundamentals of elasticity and deepen the study of mechanics of materials in order to be able to apply their knowledge to the actual behavior of solids (structures , machinery and resistant elements in general).</p> <p>This course, along with mechanics of materials course, is a holder of more specialized subjects whose object is the mechanical design.</p>			

Training and Learning Results

Code	
B3	CG3 Knowledge in basic and technological subjects that will enable students to learn new methods and theories, and provide them the versatility to adapt to new situations.
B4	CG4 Ability to solve problems with initiative, decision making, creativity, critical thinking and the ability to communicate and transmit knowledge and skills in the field of industrial engineering in Mechanical specialty.
C22	CE22 Knowledge and skills to apply the fundamentals of elasticity and strength of materials to the actual behavior of solids.
D2	CT2 Problems resolution.
D5	CT5 Information Management.
D9	CT9 Apply knowledge.
D10	CT10 Self learning and work.
D17	CT17 Working as a team.

Expected results from this subject

Expected results from this subject	Training and Learning Results			
Knowledge of the foundations of elasticity theory	B3	C22		
Further deepening on mechanics of materials and stress analysis	B3	C22	D2	
	B4		D10	
Knowledge of deformations in beams and shafts	B3	C22	D2	
	B4		D9	
Ability to apply the knowledge of elasticity and mechanics of materials, and to analyze the mechanical performance of machines, structures, and general structural elements	B4	C22	D2	
			D5	
			D9	

Ability to take decisions about suitable material, shape and dimensions for a structural element subjected to a specific load	B4	C22	D2 D5 D9 D17
Knowledge of different solving methods for structural problems and ability to choose the most suitable method for each specific problem	B4	C22	D2 D5 D9

Contents

Topic	
Fundamentals of elasticity	Introduction to the theory of elasticity Stress analysis of elastic solids Strain Stress-strain relationships Two-dimensional elasticity
Criteria of failure based in tensions	Saint-Venant's failure criterion Tresca's failure criterion Von-Mises' failure criterion Safety coefficient
Bending	Non uniform bending: Shear stresses. Zhuravski expression Principal stresses. Stress trajectories Bending and axial load: Normal stresses. Neutral axis Eccentric axial loads Kern of the cross-section Beams of different materials
Bending. Statically indeterminate beams	General method Settlements in fixed supports Continuous beams Simplifications in symmetric and antisymmetric beams
Torsion	Definition Coulomb's fundamental theory Static torque diagrams Stress and angle of twist Statically indeterminate problems
Combined loads	Definition Bending and torsion loaded circular shafts Shear center Stress and strain calculation in plane-spatial structures
Strain energy and energy methods	Strain energy: Axial load/shearing loads/bending/torsion/general expression. Clapeyron's theorem Indirect and direct work Maxwell-Betti Reciprocal Theorem Applications Castigliano's theorem. Mohr's integral. Applications
Buckling	Introduction Buckling and stability Euler's buckling. Critical load Buckling effective length Application limits of Euler's formula. Real buckling

Planning

	Class hours	Hours outside the classroom	Total hours
Introductory activities	1	0	1
Previous studies	0	6	6
Lecturing	19	38	57
Problem solving	30	45	75
Laboratory practical	24	6	30
Autonomous problem solving	0	20	20
Problem and/or exercise solving	4	24	28
Self-assessment	0	8	8

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Introductory activities	Introduction to the subject: Course aims, expected learning outcomes, course syllabus, teaching methods, assessments and grading policy.
Previous studies	Student previous activities to lectures
	The students will receive detailed instructions to complete and send certain exercises before lectures/laboratory sessions. The purpose of this assessment is to optimize the session outcome.
Lecturing	The contents of the subject will be presented in a organized way. Special emphasis will be put on the fundamentals of the subject and on the most troublesome points. To improve the comprehension, the contents of the next lectures will be announced on Tema platform on a weekly basis.
Problem solving	Each week will devote a time to the resolution by part of the student of exercises or problems proposed, related with the content that was seeing in the moment.
Laboratory practical	Application of theory concepts to laboratory collaborative works.
Autonomous problem solving	The students will be supplied with exercises and problems to solve, the solutions will be provided for level self-evaluation.

Personalized assistance	
Methodologies	Description
Autonomous problem solving	

Assessment				
	Description	Qualification	Training and Learning Results	
Laboratory practical	Active participation in all classes will be valued, and when applicable, the submission of the lab reports and their content will be assessed according to the guidelines provided by the lecturers. The grading will be on a scale of 0 to 10. The grade obtained will be the same in both the first and second opportunities of the course's examination session.	5	B4	C22 D2 D5 D9 D10 D17
Problem and/or exercise solving	Several tests will be proposed to assess the acquired learning results in the subject. They will consist of problem-solving and/or theoretical questions by the students. None of these tests will exceed 40% of the overall grade for the subject. The tests will be conducted throughout the course during class hours and/or on dates/times approved by the institution. The final test will be performed during the official examination schedule approved by the "Comisión Permanente" of the School of Industrial Engineering. It will be graded on a scale of 0 to 10. The minimum average grade for all tests will be 4.5/10, with a minimum grade of 4/10 required for each individual test. In the second opportunity of the course's examination session, there will be a single test that encompasses all the content of the subject, carrying a weight of 95% of the final grade. In this case, the minimum mark to pass the subject will be 4.5/10. The duration of the test, as well as the weight of each question, will be provided at the time of the test.	95	B3 B4	C22 D2 D9

Other comments on the Evaluation

It will be necessary to obtain a minimum score of 5 out of 10 to pass the subject. Students who have been granted with the waive of continuous assessment may take the final exam, which will be the 100% of the final mark. This exam will assess the competencies covered in the entire subject.

Comments regarding continuous assessment activities:

The failure to submit lab reports, whether justified or not, will not result in the repetition of the lab practice on a different date.

The dates and locations for all exam sessions will be set by the School of Industrial Engineering before the start of the course

and will be made public.

Ethical commitment: it is expected an adequate ethical behavior of the student. If any unethical behavior is detected (cheating, plagiarism, unauthorized use of electronic devices, etc.), it will be considered that the student does not meet the necessary requirements to pass the course. In such cases, the overall rating in the current academic year will be Fail (0.0).

The use of any electronic device for the assessment tests is not allowed unless explicitly authorized. The fact of introducing unauthorized electronic device in the examination room will be considered reason for not passing the subject in the current academic year and will hold overall rating (0.0).

Group responsible lecturer: Groups with teaching in Spanish: Aida Badaoui Fernández (aida@uvigo.gal)/ Marcos García (marcos.g.glez@uvigo.gal)

Group with teaching in English: Rafael Comesaña Piñeiro (racomesana@uvigo.gal), Antonio Riveiro (ariveiro@uvigo.gal)

Reading list for the group in English:

Recommended:

- Hibbeler R.C., Mechanics of Materials, SI Edition, Prentice Hall. 9th. edition
- José Antonio González Taboada , Tensiones y deformaciones en materiales elásticos, 2a Edición, Tórculo.
- José Antonio González Taboada , Fundamentos y problemas de tensiones y deformaciones en materiales elásticos, 1ª Edición, Tórculo.

Complementary:

- Timoshenko, Goodier, Theory of elasticity, 3rd ed., (International student ed.), McGraw-Hill
- Manuel Vázquez , Resistencia de Materiales.
